CASE NO. 10-cv-4472 BZ

**DECLARATION OF SETH SCHOEN IN  
SUPPORT OF THE ELECTRONIC  
FRONTIER FOUNDATION'S MOTION  
FOR LEAVE TO FILE BRIEF AMICUS  
CURIAE REGARDING ORDER TO SHOW  
CAUSE**

Hon. Bernard Zimmerman  
Courtroom C – 15<sup>th</sup> Floor

1 I, Seth Schoen, declare as follows:

2       **1.** I am a Senior Staff Technologist with the Electronic Frontier Foundation (EFF),  
3 and I make this declaration on my own personal knowledge. I have worked with computers and  
4 computer networks for over a decade, have testified about electronic communications systems in  
5 two courts and before the United States Sentencing Commission, and have submitted  
6 declarations similar to my present declaration to the Federal courts in at least eleven other  
7 matters.

8       **2.** The purpose of this declaration is twofold. The first purpose of this declaration is  
9 to respond to assertions made by Plaintiff that might give a misleading impression of how unique  
10 BitTorrent is or how likely it is that various Defendants interacted with each other or were aware  
11 of each other in the course of uploading or downloading the motion picture whose copyright  
12 Plaintiff accuses them of infringing. The second is to set forth facts, which were readily  
13 available to Plaintiff from free, public Internet sources at and before the time it filed suit, that  
14 establish that many of the unnamed Defendants in the above-referenced case (hereinafter “Does”  
15 or “Doe Defendants”) use Internet connections almost certainly located physically outside of the  
16 State of California.

17  
18 **STATEMENTS RELATING TO MASS JOINDER**

19       **3.** I reviewed the First Amended Complaint as well as some of the academic  
20 research on BitTorrent, as indicated below.

21       **4.** This Declaration responds to assertions made by the Plaintiff that might give a  
22 misleading impression of how unique BitTorrent is or how likely it is that various Defendants  
23 interacted with each other or were aware of each other in the course of uploading or downloading  
24 the motion picture whose copyright Plaintiff accuses them of infringing.

25       **5.** Plaintiff claims that the Defendants “have acted in cooperation with each other”  
26 because of the very nature of how BitTorrent works. Plaintiff’s Response to Order to Show  
27 Cause at 11, 15.

1           6. To the extent Defendants “have acted in cooperation with each other,” their  
2 behavior is actually strikingly similar to that of Defendants who have used file sharing systems  
3 that were at issue in previous litigation about peer-to-peer file sharing, and to the extent it is  
4 different, the differences resulted in less direct communication among users of the technology,  
5 not more.

6           7. First, BitTorrent is not the only system that has a swarming or multi-source  
7 download feature in which users can download simultaneously from several other users.  
8 Although this design was not a part of the earliest popular peer to peer systems such as Napster,  
9 it subsequently became quite widespread. For instance, the Kazaa and Gnutella software that  
10 was at issue in several copyright infringement actions have a swarming download feature that  
11 works similarly to BitTorrent's. *See, e.g.,* L. Jean Camp, “Peer to Peer Systems”, in Hossein  
12 Bidgoli (ed.), *The Internet Encyclopedia* (Wiley, 2004), vol. 3, at 30. (“In order to increase the  
13 speed of downloads and distribute the load on peer-provid[ed] files Limewire uses swarming  
14 transfers. Swarm downloading entails downloading different elements of files available on  
15 multiple low-bandwidth connections to obtain the equivalent service of a single broadband  
16 connection.”); *see also* Alex Jantunen *et al.*, “Peer to Peer Analysis: State of the Art” (Tampere  
17 University of Technology, 2006) (noting that swarming supporting protocols include at least  
18 FastTrack, Gnutella, ED2K/Overnet and BitTorrent).

19           8. Second, BitTorrent's file-focused distribution provides users with *less* ability to  
20 identify and communicate with the peers with whom they exchange files than other technologies  
21 do. For example, Napster and KaZaA, unlike BitTorrent, referred to each user by a human-  
22 intelligible and somewhat memorable screen name, instead of a number. Napster and KaZaA  
23 have also offered users the ability to chat with one another. BitTorrent does not offer these  
24 features. There is no easy way for the various BitTorrent users who have uploaded or  
25 downloaded parts of a file to recognize, name, or communicate with one another.  
26

1           **9.**     While BitTorrent client software, like other peer-to-peer file sharing software,  
2 may provide a way for a user to view the IP addresses of peers, users are not required to do so in  
3 order to use BitTorrent. They do not have to select peers' IP addresses, because the selection of  
4 peers is done automatically. Indeed, since BitTorrent automates so much of the download  
5 process, many users likely do not even know how BitTorrent works. Most BitTorrent users have  
6 no reason to know how many or which other peers they might have communicated with in the  
7 course of downloading a file, or which addresses transmitted which portions of the file.

8           **10.**    For example, the main screen of the popular Azureus BitTorrent software shows  
9 only a progress bar for the download, indication the percentage of the download that is complete,  
10 without mentioning other any other peers or their Internet addresses. *See, e.g.,*  
11 <http://torrent-search.us/images/torrent-clients/azureus-screenshot.jpg> (screenshot of Azureus  
12 software in the midst of a download). Although interested users can learn about the role of peers  
13 or view their IP addresses, they are not required to do this.

14           **11.**    I do not believe Plaintiff could have obtained direct evidence that any particular  
15 defendant shared portions of the copyrighted work at issue here with any particular other  
16 defendant, since BitTorrent does not provide a means for third parties to learn directly who is  
17 downloading files from whom.

18           **12.**    Moreover, the plausibility that a given user downloaded a part of a file from any  
19 other particular user rapidly evaporates as the number of users becomes larger or as the users use  
20 BitTorrent at widely separated times. Both are true in this case. The number of users sued  
21 together in this case is over five thousand and, according to the records submitted by Plaintiff,  
22 they allegedly used BitTorrent at different times over the course of fifty days.

23           **13.**    Both of these facts — the number of individuals named together and the different  
24 times of their alleged use of BitTorrent — make it highly implausible that all of 5,011  
25 individuals sued jointly here uploaded or downloaded a part of the file from each other.  
26  
27  
28

1           **14.** As to the different times for download specifically, the various Defendants are  
2 alleged to have used BitTorrent to transfer the movie file at very different times over the course  
3 of fifty days, which makes it even less plausible that they all could have communicated with one  
4 another. Exhibit A to the First Amended Complaint shows allegations of infringement on dates  
5 ranging from June 19, 2010, through August 7, 2010. Consistent with academic research on file-  
6 sharing using BitTorrent described below, this shows another reason why many individual  
7 defendants would never have communicated with one another: although some BitTorrent users  
8 may continue to share a file for a period of time after their download has completed, most do not.

9           **15.** Empirical research shows that most BitTorrent users do not remain connected for  
10 very long after their downloads are complete. These statistics can be measured by means quite  
11 similar to the techniques employed by Plaintiff here. One large study observed that only 3.1% of  
12 BitTorrent users stayed connected (to upload to others) more than ten hours after their downloads  
13 completed; only 0.34% stayed connected over 100 hours. J. A. Pouwelse, P. Garbacki, D. H. J.  
14 Epema, and H. J. Sips, *The BitTorrent P2P File-Sharing System: Measurement and Analysis* at  
15 4, in Proceedings of the 4<sup>th</sup> International Workshop on Peer-to-Peer Systems, *available at*  
16 <http://www.springerlink.com/content/1251rj12233u05l>.

17           **16.** Another study found that over 90% of users who successfully downloaded a file  
18 remained connected for less than a single day, while many users who attempted to download the  
19 file gave up entirely and disconnected within the first few hours. M. Izal, G. Urvoy-Keller, E. W.  
20 Biersack, P. A. Felber, A. Al Hamra, and L. Garcés-Erice, *Dissecting BitTorrent: Five Months in*  
21 *a Torrent's Lifetime* at 7, in Proceedings of the 5th International Workshop on Passive and  
22 Active Network Management Proceedings of the 4th International Workshop on Peer-to-Peer  
23 Systems, *available at* <http://www.springerlink.com/content/fg8hqw4136t0vtx9>.

24           **17.** Thus, it is highly unlikely all or even a significant number of the defendants who  
25 downloaded the subject copyrighted work here stayed on the network and became a source for  
26 another later-connecting defendant to download from days or weeks later.  
27  
28

1           **18.** In addition, according to Exhibit A of the Complaint, the Defendants allegedly  
2 participated used BitTorrent to infringe Plaintiff's work sometime between June 19 through  
3 August 7, 2010. This leads me to believe that it is very unlikely that any of these defendants  
4 directly communicated with more than a few others. Research shows (the same research cited in  
5 paragraphs 15 and 16 above) that most BitTorrent users only remain in swarms for quite short  
6 times after finishing their downloads, usually for less than a day, not nearly for the 50 days  
7 between June 19 and August 7.

8           **19.** Plaintiff alleges that more than 5,000 defendants acted "in cooperation with each  
9 other" in downloading the file in question, apparently basing this allegation on the way that  
10 BitTorrent works. Plaintiff's Response to Order to Show Cause at 11. This statement could  
11 create the misconception that each participant in a swarm communicated or exchanged portions  
12 of a file with every other participant. In fact, a downloader receives a given segment of the file  
13 from only one other user, not from all of the users participating in a given swarm. BitTorrent  
14 does not permit downloading a particular piece of a file from more than one user at a time,  
15 although different pieces of the file can be downloaded from different users. Also, a downloader  
16 only communicates with some of the users in a limited, gradually changing "peer set" of  
17 generally no more than 50 peers at a time. While it is quite plausible that some Doe Defendants  
18 shared some pieces of the allegedly infringing file with some of the other Defendants, it is far  
19 from clear (and even unlikely) that all "Defendants worked in concert" in downloading a single  
20 file in the sense of communicating with one another or exchanging portions of a file with one  
21 another.

22           **20.** As I stated earlier, many other modern P2P systems do support swarming  
23 downloads akin to BitTorrent's, so it is hard to be confident that an infringer basically copied a  
24 work from one other user in the incidents at issue in prior file sharing litigation.

25           **21.** In any case, in all peer-to-peer file sharing networks, particular files can become  
26 more widespread throughout the network over time as new users obtain them from earlier users.  
27  
28

1 Indeed, researchers have been able to quantify and analyze the spread of particular files in  
2 particular networks over time. Regardless of whether particular acts of copying involve two  
3 users or a greater number of users, the availability of a file logically depends on the decision of  
4 its original distributor to make it available. So the “events involving” people who share a file in  
5 a file-sharing system are equally “logically related” (or unrelated) in this sense, regardless of  
6 what technology underlies the file-sharing system.

7  
8 **STATEMENTS RELATING TO PERSONAL JURISDICTION**

9 **22.** By reviewing Exhibit A to the First Amended Complaint, I compiled a list of the  
10 Internet Protocol (IP) addresses that Plaintiff attributes to each of the Doe Defendants.

11 **23.** There are many tools freely available to the public that help reveal where a person  
12 using a particular IP address is likely to be physically located. This process is often referred to  
13 as “geolocation,” and it is presumably what Plaintiff used to determine that one in seven Doe  
14 Defendants is from California. Plaintiff’s Response to Order to Show Cause at 5. This  
15 information is commonly used for many purposes, such as customizing the language or content  
16 of web sites based on inferences about where visitors are accessing the site from. For example,  
17 Google, Inc., uses geolocation to choose to display its web site in German to people coming from  
18 Germany, in French to people coming from France, and so on. It also uses geolocation to display  
19 ads and results related to particular cities or regions to people accessing its site from those cities  
20 or regions.

21 **24.** One means of learning about where an IP address is physically located is known  
22 as “reverse domain name service lookup” or “reverse DNS.” When an Internet service provider  
23 (“ISP”) allocates or prepares to allocate IP addresses to customers, it typically creates and  
24 publishes database records assigning a human-readable “domain name” to each numerical IP  
25 address. The reverse lookup information can be obtained by anyone using a program such as  
26 “host,” which is a standard program included with many computer operating systems, or with  
27 any of several web-based tools such as the DNS lookup service at <http://lookupserver.com/>.

1           **25.** One of the purposes of reverse DNS is to help interested parties learn more about  
2 what a computer is used for, what organization's network it is connected to, and, in many cases,  
3 where the computer is physically located. Typically, for home users of dial-up or broadband  
4 connections, such as DSL or cable-modem services, a domain name obtained from reverse DNS  
5 will identify which ISP assigned the IP address.

6           **26.** In addition, such a domain name will frequently incorporate an approximate  
7 physical location, such as the name of a municipal area, state, or region. For example, Doe #16  
8 is identified by the IP address 68.173.115.246 and described by Plaintiff as a subscriber of Road  
9 Runner. The reverse DNS database identifies this computer as cpe-68-173-115-  
10 246.nyc.res.rr.com, confirming Plaintiff's suggestion that Doe #16 is a Road Runner ("rr.com")  
11 customer, but adding the additional detail that the likely physical location of the computer is in  
12 or near New York City ("nyc"). This means that in all likelihood, the individual who used this  
13 IP address is located in the State of New York.

14           **27.** Although Internet service providers are not required to publish this information,  
15 and although it is sometimes only given to state-level precision, it can, when available, be a  
16 useful source of data about where an individual Internet connection is most likely located.

17           **28.** For each of the 5,011 IP address that were references in this suit, I used the "host"  
18 program to perform a reverse lookup against the publicly-accessible reverse DNS service.

19           **29.** The results of this process generally confirmed Plaintiff's association of particular  
20 IP addresses with particular ISPs. Additionally, the results of this process generally strongly  
21 suggested a geographic location for most individual defendants. In other words, most of the  
22 Does listed in this lawsuit can be associated by the host reverse DNS look-up with both an  
23 Internet service provider and a geographic location.

24           **30.** Reverse DNS records indicate that Does in this lawsuit include customers with  
25 Internet connections located in virtually all areas of the United States, including some in or near  
26 Hawaii, Washington, D.C., Pennsylvania, Georgia, Kansas, Florida, Illinois, and other states and  
27  
28

1 regions throughout the United States.

2  
3 **31.** In addition to reverse DNS information, another means of learning where an IP  
4 address is located is to use a public database operated by the American Registry for Internet  
5 Numbers (“ARIN”). ARIN is the authority responsible for the initial allocation of IP addresses  
6 to ISPs located in the United States. ARIN maintains public records indicating to whom a given  
7 IP address has been allocated. Large ISPs may apply to ARIN multiple times to receive multiple  
8 “blocks” or ranges of IP addresses. Each such block may be dedicated to a particular purpose or  
9 geographic area.

10 **32.** The ARIN database can be searched using a public web site provided by ARIN at  
11 <https://www.arin.net>, or by using a program called “whois,” which is a standard part of some  
12 operating systems and performs the same database-searching function. There is no charge for  
13 searching the ARIN database.

14 **33.** For example, Doe Defendant #390 is identified by the IP address 71.239.28.99. I  
15 searched the ARIN whois database for this address and learned that this address is part of a  
16 network assigned to “Comcast Cable Communications.” The whois record also a field called  
17 “Name” which has the value “ILLINOIS-29.” This information is readily available at  
18 <http://whois.arin.net/rest/net/NET-71-239-0-0-1/pft>. Combined with the reverse DNS record for  
19 this IP address, which is c-71-239-28-99.hsd1.il.comcast.net, there is a strong inference that the  
20 user of this IP address resides in or around Illinois, not California.

21 **34.** In addition, several companies collect and continually update geographic  
22 information about IP address locations from a variety of data sources, and collect this  
23 information in databases called “geolocation databases.” Geolocation databases are commonly  
24 used by web site operators who are interested in finding out the approximate physical location of  
25 their web visitors. Since web site operators are often very interested in such information, there is  
26 considerable demand for geolocation databases.

1           **35.**     Geolocation databases may be sold or given away for free. One very popular  
2 geolocation database is the “GeoIP” database maintained by MaxMind, Inc., a Boston company  
3 that specializes in geolocation technology. In addition to other sources of information, MaxMind  
4 explains that it “employ[s] user-entered location data from sites that ask web visitors to provide  
5 their geographic location” in order to learn which IP address ranges correspond to which cities  
6 and states. MaxMind, <http://www.maxmind.com/app/ip-locate> (last visited August 12, 2011).

7           **36.**     A version of the MaxMind GeoIP geolocation database is freely available for  
8 anyone to download from MaxMind. The company claims that this free version can determine  
9 the location of “79% [of U.S. IP addresses] within a 25 mile radius.” MaxMind,  
10 <http://www.maxmind.com/app/geolitecity> (last visited August 12, 2011).

11           **37.**     I downloaded this freely available database and looked up each mentioned IP  
12 address in it, obtaining an estimated city and state location for each such address.

13           **38.**     Because DSL and cable modem connections are provided from local hubs to users  
14 in a particular geographic region, there is good reason to believe that the geographic location  
15 data obtained by these methods actually reflects the physical location of the Internet connection,  
16 at least in general terms. In other words, although geolocation data is not perfectly accurate, the  
17 geographic designations obtained by these methods likely indicate the approximate locations of  
18 the residences or other venues where the Does use their Internet-connected computers.

19           **39.**     I have attached hereto as Exhibit A to this Declaration a list of the reverse DNS  
20 names of the Doe Defendants' distinct IP addresses, as well as the estimated physical location of  
21 each such IP address according to the freely available version of the MaxMind GeoLite City  
22 database.

23           **40.**     Though the MaxMind GeoLite City database and reverse DNS records are not  
24 perfectly accurate, I know of no reason to think that either source of information has a bias that  
25 makes it more or less likely that an individual IP address will appear to be located in California.

26           **41.**     From the information available from the MaxMind geolocation database, 743  
27  
28

1 (seven hundred forty-three) of the IP addresses appear to be located in the State of California,  
2 4232 outside of California, and 36 are not assigned to any location by the database. This puts  
3 around 14.8% of the IP addresses in the State of California, comparable to the 12.1% of the  
4 population of the United States as a whole that resides in California according to the 2010  
5 Census.

6       42. Separately from the question of where Does reside, Plaintiff did not publicly  
7 submit all the details of the investigations that led it to accuse these Does of copyright  
8 infringement. These details could be important because simple methods of attempting to locate  
9 copyright infringers can easily go awry. For example, in 2008 researchers from the University of  
10 Washington found that, given then-prevalent methods for investigating BitTorrent transfers, it  
11 was straightforward to frame particular IP addresses for downloading files that they had not, in  
12 fact, ever attempted to download. The researchers experimentally framed their own laser printer  
13 and succeeded in eliciting false allegations of copyright infringement against it. See Michael  
14 Piatek, Tadayoshi Kohno, and Arvind Krishnamurthy, "Challenges and Directions for  
15 Monitoring P2P File Sharing Networks, or, Why My Printer Received a DMCA Takedown  
16 Notice," in *Proceedings of the 3<sup>rd</sup> USENIX Workshop on Hot Topics in Security*, July 29, 2008,  
17 available at [http://www.usenix.org/event/hotsec08/tech/full\\_papers/piatek/piatek.pdf](http://www.usenix.org/event/hotsec08/tech/full_papers/piatek/piatek.pdf).

18  
19 I declare under penalty of perjury under the laws of the Germany that the foregoing is  
20 true and correct and that this document was executed in Schorfheide, Brandenburg, Germany.
